

For Immediate Release:

Worldwide Business with kathy ireland® Explores Telehealth Solutions with ViTel Net

Los Angeles, CA - August 14, 2018 – Worldwide Business with kathy ireland® is pleased to announce an exclusive interview with [ViTel Net](#) CEO Allen Izadpanah and SVP Business Development Mark Noble to share how their [interoperable enterprise telehealth platform](#) removes the barriers to successful and scalable virtual care programs.

For over 20 years, ViTel Net has pioneered a broad range of standards-based solutions across the telehealth continuum of care that allow clinicians to [remotely diagnose, treat and manage](#) patient health, regardless of geographic or time-sensitive barriers. Their cloud based vCareCommand platform aggregates patient data into a single user experience and solves the challenge of access to patient records and image studies for consulting specialists via automated backend integration with multiple telehealth vendors, EHRs, PHRs, and PACS. The user experience of the ViTel Net's suite of mature point of care solutions is rapidly configurable to meet the unique workflow needs of each specialty of each customer, making physicians more efficient and accelerating adoption.

“There’s an operational capacity issue for the U.S. in healthcare today. You have a burgeoning demand for increasingly complex healthcare services due to a variety of factors and a shrinking pool of specialists that aren’t uniformly distributed across the country,” says Noble. “Leading health systems are recognizing that scalable virtual care programs are essential to closing the gap, and enterprise virtual care platforms like vCareCommand provide the standardization necessary to achieve scale and access to the business intelligence to manage it.”

“We developed a configuration and development platform that allows us to either mimic workflows and user experiences of a health system’s existing health IT tools, or they can choose our own off the shelf user experiences for the entire telehealth continuum of care,” says Izadpanah. “We know we have done our job when clinicians feel as comfortable practicing medicine at a distance as they do when in person.”

“Working with ViTel Net, I am able to use telemedicine to reach new borns, children and older patients around the world,” says Dr. Craig Sable, Director of Echocardiography at a Washington D.C. based children’s health system. “I’ve been able to work with ViTel Net to bring telemedicine in pediatric cardiology. Together, we’ve taken care of thousands of patients.”

“Telehealth is the wave of the future,” says J.L. Haber, Vice President of Programming. “ViTelNet has been setting the standard for years, and continues to make great strides in the telehealth space.”
